# Office Memorandum • UNITED STATES GOVERNMENT

TO : Mr. R. T. Harbo

~~CONFIDENTIAL~~

DATE: October 21, 1949

FROM : C. F. Downing

SUBJECT: ~~Cryptanalysis-Translation Section~~ (U)  
Administrative

Attached is an inventory of material other than intercept which has been placed in dead storage and retained for analytical purposes at some future date. (U)

## RECOMMENDATION:

It is recommended that the following items be transferred to the appropriate administrative files:

Country	File #	Type of Material
[REDACTED]		Material removed from Laboratory files.
		Material removed from Laboratory files.
		Material removed from Laboratory files.
		Material removed from Laboratory files.

It is further recommended that all other items on the attached list be destroyed provided this action meets with the approval of the Security Division. The latter's attention, however, is invited to [REDACTED] under [REDACTED] which pertains to the case entitled [REDACTED] (U)

RECOMMENDATION:

In view of the fact that this information may be of some value to the Cryptographic Section of the Laboratory, it is suggested that this memorandum be submitted to that section for informational purposes.

b7E

EX-62

88 JAN 16 1945

Copy 5-2-46 rmb

TO : MR. D. M. LADD  
FROM : MR. C. H. CARSON  
SUBJECT: DIPLOMATIC CODES

DATE:  
DECEMBER 27, 1945

b7E

Although interest in decodes of diplomatic messages has declined because of the end of the war and the lack of espionage and related similar information, there is no question as to the value of decoding other nations' diplomatic messages in connection with general intelligence coverage. It is understood that the Bureau's Cryptographic Section has ceased working on various diplomatic coded messages, many of which we had been able to decode during the war period. In spite of the end of the war, the State Department naturally is still greatly interested in any information that can be obtained from diplomatic sources through decodes of messages or other wise, in view of the tense international and local political situations which prevail all over the world, and in view of the numerous international conferences which are being held or contemplated, including Pan American conferences confined to the Western Hemisphere.

Obviously, in connection with our SIS coverage, every means must be exhausted in the Western Hemisphere to obtain all possible information regarding the intentions, plans and moves of other governments. It would appear essential, if we are to obtain a complete coverage in this field, that we endeavor to decode the diplomatic messages of at least some nations. There of course would be times when it would be of outstanding importance to endeavor to secure information from the diplomatic messages such as when a Pan American conference is held or a crisis develops between the United States and a Latin American nation such as now exists with Argentina. Unless continuing attention, however, is given to diplomatic codes which are changed frequently we would not be in a position to decode the messages at a critical time; in other words, continuing attention must be given to cryptanalytic efforts in order to keep abreast of current developments in the field, so that this means of obtaining information may be used when urgently needed.

It would be of outstanding importance if it were possible to obtain decodes of the Russian, Spanish and French Governments on messages sent to their embassies in the Western Hemisphere, because these nations appear to be the chief threat to the United States prestige and influence in Latin America, and are more likely to resort to subversive tactics.

In South America it would appear that we should endeavor to constantly keep up with cryptanalytic developments in the more important nations, which of course are of outstanding interest to the United States Government. The principal nations in this category would be Argentina, which incidentally presents the gravest problem in Western Hemisphere solidarity at present; Brazil, the largest and most powerful of the Latin American nations; and Mexico and Cuba, both of which countries are in proximity to the United States, are large and influential in Latin America, and developments in which are of outstanding interest to us.

Of lesser interest, but of course not without interest at present, are the messages of Peru, Ecuador, Chile, Uruguay, Colombia, and Venezuela, all of which are important because of their size or because of a particular influence

RECORDED

65-54417-2X  
MAY 3 1946

52 MAY 23 1946

they exercise. The other countries of Latin America are relatively small and unimportant.

It is believed that the messages transmitted from the foreign offices of the countries enumerated as important in Latin America to the embassies in Washington would be easily obtainable and would be of importance and provide sufficient material for the Cryptanalytic Section to successfully work on codes.

#### RECOMMENDATION

It is recommended that the Cryptanalysis Section of the Laboratory work on the diplomatic messages of the French, Spanish and Russians, which are transmitted to the Latin American countries. It is also recommended that the Laboratory work on at least the messages of the more important countries of Latin America, that is, Argentina, Brazil, Mexico, and Cuba, and that if at all possible this work be extended to other countries in the following order:

- Uruguay
- Chile
- Colomiba
- Venezuela
- Peru
- Ecuador

It is also recommended that the Washington Field Office be instructed to endeavor to make arrangements to obtain copies of the diplomatic messages exchanged between the embassies of these same countries here and their respective foreign offices, in order that they can be worked on by the Cryptanalytic Section.

VPK:mr

~~PERSONAL AND CONFIDENTIAL~~

SAC, Washington

January 7, 1946

John Edgar Hoover, Director, Federal Bureau of Investigation

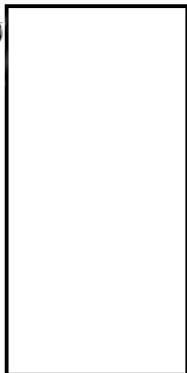

Diplomatic Code Messages

The Bureau desires that in addition to copies of Spanish, Argentine and Yugoslav Diplomatic messages which you are presently securing through your contacts in the several cable companies, you also make an effort to obtain copies of messages of the following governments: Russia, France, Mexico, Cuba, Brazil, Uruguay, Chile, Colombia, Venezuela, Peru and Ecuador.

(The Security Division by memorandum dated December 27, 1945, under caption "Diplomatic Codes", requested cryptanalysis work in these cases.

[Redacted box]

b7E

Bureau File

[Redacted box]

The following information concerning the specimens listed hereinafter, in connection with the above-entitled matter, is being set forth as a matter of record.

- Q5 A work report reflecting [redacted] of the countries of Western Europe and several of South America.
- Q6 A file containing number-code telegraphic messages emanating from [redacted]
- Q7 A folder marked [redacted] containing many number-code telegraphic messages. Some are partly in number-code and partly in [redacted] language. Still others contain [redacted] words written in longhand above some of the numbers showing the results of someone's decoding efforts.

Specimen Q5 is a work report, apparently compiled in 1927, reflecting progress made in "breaking" codes of various countries during the past three years. The countries whose codes are discussed are: England, Chile, Mexico, Ecuador, Portugal, Colombia, Bolivia, Peru, Uruguay, Brazil, Spain and Argentina.

b7E

Specimen Q6 is a file containing number-code telegraphic messages emanating from Buenos Aires during the period 1923 through 1926. Plain text values have been written in above a few of the groups.

Specimen Q7 is a folder marked [redacted] containing [redacted] number-code telegraphic messages sent during the early part of 1924. Plain text values have been written in over many of the groups and some messages appear to be entirely decoded.

Specimens Q5, Q6 and Q7 are attached hereto for inclusion in the Administrative Files and no copies are being retained in the Laboratory.

Reference is made to my memorandum of June 3, 1946 reporting two messages in connection with the above matter which became readable through analysis in the Laboratory. In this regard, a considerable portion of the code book has been reconstructed and, therefore, it will be possible to read more and more messages if greater coverage of this traffic is obtained.

A review of the traffic received from the Washington Field office shows that during the last five months' period, only thirty-six messages were received in the Laboratory, although the message numbers indicate that at least fifty-three were sent. The last message received was dated May 1, 1946.

It is suggested that the Security Division may wish to advise the Washington Field office of the above situation in regard to coverage.

Attached is Source #3 material originating in the Washington Field Office.

This message was read through the use of a commercial code book, the ABC Telegraphic Code, 6th edition.

It is noted that a plain text message sent from [REDACTED] advised that Washington had no code to decode this message. A plain text message was then sent from [REDACTED] followed by a service message stating that the text of the plain language message is the same as that of the coded message.

Although the address differs from that of ordinary diplomatic traffic, this message was sent as a government cable.

The service messages and the plain language message are attached. It is noted that the plain language message differs slightly from the text of the coded message.

Attached is Source #3 material originating in the Washington Field Office.

These messages were enciphered by means of a system just reconstructed in the Laboratory. The system is composed of digits which are substituted for the letters or digraphs of the message, and further enciphered by the use of additives, as described in the attached sheets.

The Laboratory has on hand five other messages in this system which can be read. These messages were sent between [redacted] between May 6, 1943 and January 29, 1946. Translations are not being furnished at this time in the absence of a request from the Security Division, since the messages are over 90 days old.

The above matter is strictly ~~confidential~~ and care should be taken to protect its source.

BUREAU SOURCE #3 - URUGUAYAN

EXPLANATION OF MILITARY ENCIPHERMENT SYSTEM

The messages are enciphered with the attached encipherment table. It is to be noted that some groups of the table represent digraphs and others represent single letters. To this preliminary encipherment, an additive, based on the day of encipherment, is applied. Should the day of encipherment be 10 or over, only the last digit of the number is used in the derivation of the additive. Example: if the message were sent on May 24, CUATRO would be used to obtain the additive. The letters of the word CUATRO would be given the numerical values assigned to them in the encipherment table. The resultant sequence is added to the preliminary encipherment, giving the cipher text which is then transmitted in five digit groups. It is to be noted that one carries over in adding, but only within each two digit group.

Decipherment is the reverse of encipherment.

Example of encipherment:

	- plain text	b7E
	- preliminary cipher equivalents	

Date - May 3:  (indicator placed at beginning of message).

Numerical values substituted for day of encipherment:

	- Day of encipherment
	- repeated additive

Additives placed beneath preliminary cipher text and addition performed by carrying over within the two-digit groups.

Preliminary C.T.  
Additive  
Final C.T.

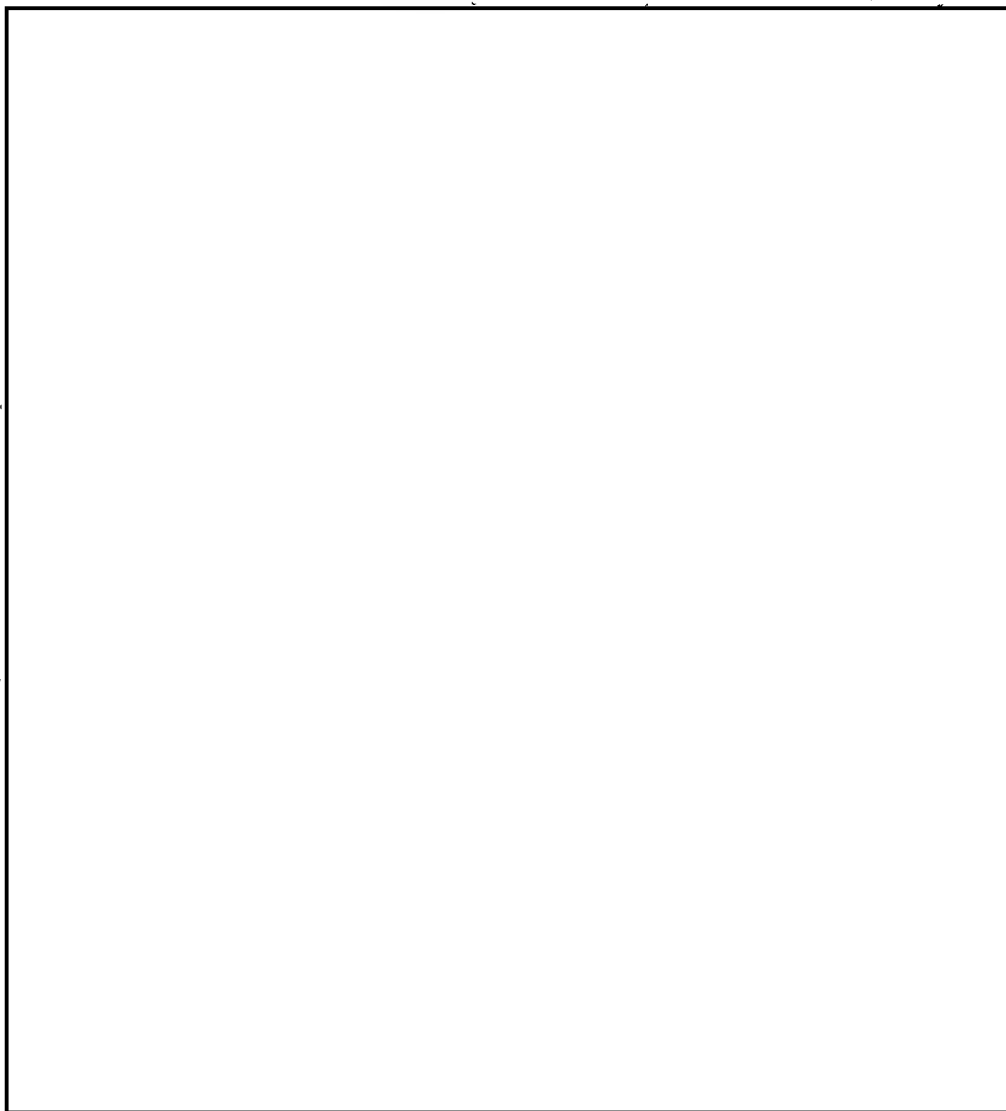

Text as transmitted:

In accordance with my memorandum dated June 19, 1947 under the caption, "Cryptanalysis; F. B. I. Allocation", the above-entitled case is being closed in the Laboratory.

Three envelopes containing approximately  covering the period from February 24, 1943 to May 29, 1947, message logs and worksheets on partially reconstructed messages are being transferred to the Records Section for storage on the eighth floor.

The monthly technical summaries and analysis record sheets on this case are attached hereto.

MONTHLY TECHNICAL SUMMARY  
BUREAU SOURCE 3 - URUGUAYAN  
FILE 65-54414  
JULY, 1946

CRYPTANALYSIS PERFORMED:

1. 4-letter code (one part) ---- 102 groups were added to the code book under reconstruction, bringing the total number of groups to 2951.

These groups were reconstructed by means of the probable word method. Tentative group values were assigned to the most frequent groups in one message and checked against the same groups in other messages to determine their correctness.

2. Military substitution cipher ---- the encipherment table, consisting of digraphic and single letter values was reconstructed.

One long message, Crypt No. 302539, which was transmitted on April 26, 1946, was used as a basis for the study. A tri-digit frequency count was made and all repetitions marked. The repetitions occurred at intervals of 8 or multiples of 8. When written out in sections of four 2-digit groups each, the first and fourth columns appeared to be similarly enciphered. An additive was used on the second and third lines in an attempt to get them back into the same encipherment as the first and fourth columns. Trying this procedure on the remaining messages, it was discovered that the additive depended on the day of encipherment, which day was given at the beginning of every message in plain text. The message sent on April 26, and preceded by the plain text "Abril veintiseis", was found to have used 00519200 as a repeated additive. The value S was given to cipher 00, E to 51, I to 92. After inserting these values, and those derived from additives based on other days, probable words were guessed, and it was then found that the encipherment table used digraphs as well as single letter values, so that the frequency of vowels was greatly decreased. Copies of the encipherment and decipherment tables have been placed in the C-K file.

CRYPTANALYSIS CONTEMPLATED:

1. 4-letter code (one part) ---- the probable word method of attack

C

will be continued. Tentative values will be assigned the most frequent groups and these values will be checked against the same groups of other messages.

2. Military substitution cipher ---- any future messages received will be deciphered by means of the encipherment table reconstructed.

Christine M. Lowman  
7-31-46

MONTHLY TECHNICAL SUMMARY  
BUREAU SOURCE #3 - URUGUAYAN  
#65-54414  
JUNE, 1946

CRYPTANALYSIS PERFORMED:

2011 groups were added to the code book under reconstruction, bringing the total number of groups to 2849.

During the month, two messages were reported which had been previously reported as no decodes. These messages became readable using the partially reconstructed code book.

A preliminary study of the seven military messages was made. These messages appear to be a digit cipher but this has not been proved since there is such a limited amount of material with which to work.

CRYPTANALYSIS CONTEMPLATED:

Using the frequency count of messages available, the probable word method of attack will be continued.

When time permits, the military messages will be studied further in an attempt to determine whether or not they are a digit cipher, and if so, to determine if an additive is being used.

Christine M. Lowman

MONTHLY TECHNICAL SUMMARY

~~URUGUAYAN GROUP~~ *Barcan Source #3 - Uruguayan*

65-54414

MAY, 1946

b7E

CRYPTANALYSIS PERFORMED:

With the aid of [redacted] English plain text for messages B1488, B1499, B1501, B1510, B1515 transmitted [redacted] and message B2100 [redacted] it was possible to reconstruct 838 groups of the code book used. The code book used is a one-part code with a maximum of 51,948 groups and contains a rather large supplement. 234 groups of the code book proper have been reconstructed, as well as 115 groups in the syllabary, 100 numbers (from 1 to 100), 365 groups giving the days of the year, 13 groups designating places, 8 groups giving proper nouns and 3 punctuation groups.

CRYPTANALYSIS CONTEMPLATED:

The probable word method using frequencies will be continued.

Christine M. Lowman

5-31-46

*CME*

*PA*

MONTHLY TECHNICAL SUMMARY

April, 1946

URUGUAYAN DIPLOMATIC GROUP

File - 65-54414

CRYPTANALYSIS PERFORMED:

The frequency count of groups was studied in order to determine the maximum size of the code book used. From this study, it was noted:

1. each group contains two consonants and two vowels, but in no specific order.
2. all letters except Q and Z have been used as beginning letters of groups.
3. all letters except Q have been used in the second position of the groups.
4. all letters have been used in the third position.
5. all letters except Q were used in the fourth position.

(Inasmuch as the Q is used only once in the third position, this instance may be due to a garble, but there is not enough material on hand to determine whether or not this is the case, so this letter is being included in the computation of the number of code groups.)

The arrangement of the groups and the computation of the number of possible groups is as follows:

- |   |               |                               |
|---|---------------|-------------------------------|
| 1. v-c-v-c = $6 \times 19 \times 6 \times 19$ | = 12,996      | groups                        |
| 2. v-c-c-v = $6 \times 19 \times 20 \times 6$ | = 13,680      | "                             |
| 3. c-v-v-c = $18 \times 6 \times 6 \times 19$ | = 12,312      | "                             |
| 4. c-v-c-v = $18 \times 6 \times 20 \times 6$ | = 12,960      | "                             |
|   | <u>51,948</u> | maximum number of code groups |

Files   and #65-54414 were reviewed in order to find out if a technical surveillance had been placed on the Embassy, but no record was found of such a surveillance.

b7E

On April 25, 1946, this case was assigned a B-C priority by the Security Division.

CRYPTANALYSIS CONTEMPLATED:

The probably word attack will be used when more traffic is available.

C. M. Lowman  
4-30-46

MONTHLY TECHNICAL SUMMARY

March, 1946

URUGUAYAN DIPLOMATIC GROUP

File - 65-54414

CRYPTANALYSIS PERFORMED:

The total number of messages now available for analysis is 24, of which 22 are in the same system. Frequency counts have been made of each of these messages and the groups used are being arranged in alphabetical order so that they may be studied in connection with the probable word method of attack.

The first group of each message now gives the message number unenciphered, thus seeming to prove that the first group of messages Qc1, 2, 5, 6, are indicator groups which have been enciphered. These groups are always begun by the letter B and it is noted that the present message numbers are preceded by the letter B.

CRYPTANALYSIS CONTEMPLATED:

When a larger volume of traffic is obtained, the frequency counts will be studied and efforts will be made to guess probable words for the most frequently used groups, and those groups which are found as repeated beginnings of messages. Embassy and Consulate files will be checked to determine if any technical surveillances have been conducted in this case.

C. M. Lowman  
3-29-46

MONTHLY TECHNICAL SUMMARY

February, 1946

URUGUAYAN DIPLOMATIC GROUP

File - 65-54414

CRYPTANALYSIS PERFORMED:

Six additional messages, Qc2 through Qc7, have been received in the Laboratory. Frequency counts of these messages reveal many four-letter repetitions identical with those of message Qc1 as well as those of messages transmitted from [ ] and from [ ]. A frequency count of the groups of all these messages has been made, and it is noted that all the letters of the alphabet except Q and Z are used for beginning letters of the groups. These groups always contain two vowels and two consonants, although the order is not always constant. Having reviewed some of the plain text messages which are available to the Laboratory, and noting the numbering of these messages, it is believed that the first group of the present traffic is an indicator group indicating the message number. The present volume of traffic is still too small to determine if this assumption is correct.

b7E

The four-letter code books available to the Laboratory have been used to see if any of these messages are decodable, but this attempt has met with negative results.

CRYPTANALYSIS CONTEMPLATED:

As additional messages are received, they will be studied and an effort will be made to determine what type of code book is being used.

Christine M. Lowman  
2-28-46

MONTHLY TECHNICAL SUMMARY

January, 1946

URUGUAYAN DIPLOMATIC GROUP

File - 65-54414

CRYPTANALYSIS PERFORMED:

One message, Qcl, has been received since this case was re-opened. The message is transmitted in five-letter groups. A trilateral frequency count was made and all the repetitions marked. It was noted that all the repetitions occur in four-letter groups, and it is believed that a four letter code is being used, although the traffic is transmitted in groups of five letters. Qcl was compared with six messages sent from [redacted] during the period from October 20, 1944 to June 9, 1945 and four messages sent from [redacted] during the period from October 31, 1944 to June 12, 1945. Trilateral frequency counts of these messages revealed repetitions of four letters, such as were found in message Qcl. Inasmuch as repetitions are noted between message Qcl and these messages just mentioned, it is possible that the same encipherment system is being used. In some of these messages one or two five letter groups precede the message proper and these are believed to represent indicator groups. The function of these groups is undetermined as yet.

For background information, a preliminary study has been made of traffic transmitted during 1943. These messages are made up of plain text, variable length digit groups and what appear to be four-letter code words. Repetitions of the supposedly four-letter code words are very numerous and also many repetitions are found in the digit groups.

b7E

CRYPTANALYSIS CONTEMPLATED:

The four letter groups of message Qcl and of those messages sent between [redacted] will be searched through the code books available to the Laboratory in an effort to determine if any of the books on hand have been used for enciphering these messages.

An effort will be made to determine if the traffic sent during 1943 may be the same type of traffic but transmitted in a different manner.

PP
